

Amendments to the Claims:

Please amend claims 1, 9-11 and 17, cancel claims 6-7, 12, and 19-20, and add claims 22-26 as follows. This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A modular base for an industrial machine, comprising:

a mounting table adaptable to support said industrial machine;

a plurality of legs connected to said mounting table;

a plurality of rollers connected to said legs for rollably moving said mounting table to a desired location; and

means adaptable for releasably securing said mounting table to a foundation[.] ; and

a programmable controller coupled to said mounting table and adaptable to be in communication with said industrial machine; and

a control panel coupled to and in communication with said programmable controller and adaptable to manipulate said industrial machine.

2. (Previously Presented) The modular base stated in claim 1, comprising:

A plurality of telescopically adjustable legs connected to said mounting table for adjustably positioning said mounting table at a desired height.

3. (Previously Presented) The modular base stated in claim 1, further comprising:

a plurality of telescopically adjustable legs connected to said mounting table for adjustably positioning said mounting table at a desired height.

4. (Original) The modular base stated in claim 1, wherein said means for releasably securing further comprises:

a plurality of mounting platforms coupled to said mounting table and adaptable to be releasably fixtured to a foundation.

5. (Original) The modular base stated in claim 1, further comprising:

a light fixture connected to and extending from said mounting table and adaptable to cast light onto said industrial machine.

6. (Cancelled)

7. (Cancelled)

8. (Original) The modular base stated in claim 1, further comprising:

a pneumatic controller coupled to said mounting table and adaptable to communicate with said industrial machine.

9. (Currently Amended) A modular base for an industrial machine, comprising:

a mounting table adaptable to support said industrial machine;

a plurality of ~~telescopically adjustable~~ legs each having a first support with a vertically

adjustable roller, and a telescopically adjustable second support connected to said mounting table for adjusting the height of said mounting table[;] and selectively engaging said rollers with a foundation; and

~~a plurality of rollers connected to said legs for rollably moving said mounting table to a desired location; and~~

a plurality of mounting platforms connected to said legs and having a plurality of apertures extending therethrough wherein said apertures are adaptable to receive a plurality of fasteners for releasably securing said mounting platform to [a] said foundation.

10. (Currently Amended) The modular base stated in claim 9, wherein said mounting table further comprises:

a substantially horizontal U-shaped plate fabricated from a hardened steel and adaptable to support said industrial machine thereon, wherein ~~said~~ an open end of said U-shaped plate is accessible to a user.

11. (Currently Amended) The modular base stated in claim 9, further comprising:

an electric drive coupled to each telescopically adjustable second support of said adjustable legs for driving the telescopic adjustment of said legs.

12. (Cancelled)

13. (Original) The modular base stated in claim 9, further comprising:

a light fixture connected to and extending from said mounting table and adaptable to

cast light onto said industrial machine.

14. (Original) The modular base stated in claim 9, further comprising:

a programmable controller coupled to said mounting table and adaptable to be in communication with said industrial machine.

15. (Original) The modular base stated in claim 14, further comprising:

a control panel coupled to and in communication with said programmable controller and adaptable to manipulate said industrial machine.

16. (Original) The modular base stated in claim 9, further comprising:

a pneumatic controller coupled to said mounting table and adaptable to communicate with said industrial machine.

17. (Currently Amended) A modular base for an industrial machine, comprising:

a hardened steel, plate-like mounting table adaptable to support said industrial machine;

a plurality of ~~telescopically adjustable~~ legs each having a first support and a telescopically adjustable second support connected to said mounting table for adjusting the height of said mounting table and selectively engaging said rollers with a foundation;

an electric drive coupled to said second support of each of said adjustable legs for driving the telescopic adjustment of said legs;

a plurality of ~~caster~~ caster wheels adjustably connected along the height of said first

supports of said legs for rollably moving said mounting table to a desired location; and

a plurality of mounting platforms connected to said legs, and said mounting platforms having a plurality of apertures extending therethrough wherein said apertures are adaptable to receive a plurality of fasteners for releasably securing said mounting platforms to a foundation[.];

a programmable controller coupled to said mounting table and adaptable to be in communication with said industrial machine; and

a control panel coupled to and in communication with said programmable controller and adaptable to manipulate said industrial machine.

18. (Original) The modular base stated in claim 17, further comprising:

a light fixture connected to and extending from said mounting table and adaptable to cast light onto said industrial machine.

19. (Cancelled)

20. (Cancelled)

21. (Original) The modular base stated in claim 17, further comprising:

a pneumatic controller coupled to said mounting table and adaptable to communicate with said industrial machine.

22. (New) The modular base stated in claim 3, wherein adjustment of said plurality of telescopically adjustable legs is operable to selectively engage and disengage said plurality of rollers with said foundation.

23. (New) The modular base stated in claim 9, wherein adjustment of said rollers and telescopic adjustment of said legs occur along parallel axes.

24. (New) The modular base stated in claim 9, wherein said first and second supports are substantially vertical.

25. (New) The modular base stated in claim 17, wherein adjustment of the rollers and telescopic adjustment of the legs occur along parallel axes.

26. (New) The modular base stated in claim 17, wherein said first and second supports are substantially vertical.
